## RESEARCH SUPPORT AND GRANT-RELATED ACTIVITIES

From 1981-2001, I was a Federal Government employee. This section highlights ongoing projects as well as completed projects, providing brief descriptions to illustrate funded research efforts at Texas A&M from 2001 to present.

### Ongoing Projects:

**Principal Investigator. 2021-2022. Community Connect 4 Health.** Despite the availability of vaccines to prevent the spread of COVID-19, the uptake has been slow, especially in rural and underserved areas. Funded by the Texas Department of State Health Services, this COVID Outreach and Education grant will create a consortium reflecting different community touchpoints across multiple geographic settings, key stakeholder groups, and sectors. Key objectives are to 1) build a consortium of partners who will work together to understand current barriers to getting vaccinated especially among persons living in vulnerable communities, 2) train a cadre of community members to communicate the importance of COVID-19 vaccination and share accurate information and materials, 3) use these channels to inform the public about the benefits of vaccinations, 4) collaboratively identify effective strategies for reducing barriers and motivating unvaccinated persons to get vaccinated and encourage their peers to do so too, and 5) link persons to places where they can easily get vaccinated.

**Principal Investigator (Sub-contract from Olera Inc). 2021-2024. Online Platform to Increase Access to Personalized Educational and Professional Assistance for AD/ABD Caregivers.** Notwithstanding the proliferation of caregiving resources, persons caring for individuals living with dementia often find it difficult to assess relevant information in a timely fashion. The long-term objective of this proposed research is to develop a technology-based solution that integrates web and mobile platforms to link dementia caregivers with personalized information and resources that are easily accessible by populations across the socioeconomic spectrum. Supported by NIH, the proposed study will focus on information and educational materials on financial management and legal planning. Involving industrial, academic, and community partners, this collaborative project is oriented around two phases. Phase 1 involves the development of the digital platform based on a novel Dementia Care Personalization Algorithm and initial feasibility assessment. Phase 2 involves the evaluation of the acceptability of the digital platform across racial/ethnic populations.

**Co-investigator. 2021-2024. Digital Twin City for Age-friendly Communities - Crowd-biosensing of Environmental Distress for Older Adults.** There is a growing body of research documenting how the built environment affects older people in terms of their ability to be more physically active. Supported by NSF, this study seeks to create a digital twin city (DTC) model that reveals older adults' collective distress and associated environmental conditions, and leverage the DTC model to develop and evaluate technological and environmental interventions to alleviate older adults' distress while walking and promote their independent mobility.

Using wearable sensing data of older adults to detect physiological distress, the project will identify where, why, and to what extent older adults experience distress in their daily routine. A special aspect of this project is to utilize older adults' distress data to inform and develop strategies (e.g., design, policy, and technology) to create age-friendly communities.

**Co-investigator. (Sub-contract from Fred Hutchinson Cancer Research Center). 2021-2022. COVID-19 CoVPN.** With the novel coronavirus surging throughout the US with detrimental health effects, it is important to understand how we can prevent further spread. The overall goal of this NIH-funded study is to increase our understanding of vaccine efficacy, clinical impacts, and transmission potential on vaccinated vs unvaccinated adults 18-29. This study and surveillance will establish the first comprehensive understanding of the vaccine in this important age group and demographic. With the evolution of COVID-19, this study will shift toward a natural transmission study of at-risk households. This study will enable us to obtain definitive, robust data on the risk of transmission of breakthrough infections to contacts over time, including for asymptomatic infections.

**Principal Investigator (Multi-PI). 2021-2022. An Interface Design for Older Adults Living with Cognitive Impairments to Use Automated Vehicles.** Current automated vehicles (AV) and in-vehicle technologies are not designed to support older adults with cognitive impairment. The objectives of this multidisciplinary study are to (1) develop a user interface for older adults with mild to moderate cognitive impairment to be used in AVs, and (2) evaluate the effectiveness of the interface on the mobility of older adults. Evaluation methods include online surveys, focus group meetings, and phone interviews with caregivers and older adults with mild to moderate cognitive impairment to understand their perception of AVs, suggestions to improve the mobility of older adults with mild to moderate cognitive impairment, and preferences regarding the interface design concept and its usability. The outcomes of this study will lay the foundation for an accessible human-machine interface for AVs, improve the mobility of older adults, and increase passenger vehicle accessibility.

**Co-investigator. 2020-2021. Exploring the Safety Impacts of the Older Population's Access to Autonomous Vehicles (AV) and Telemedicine: A Real-World Experiment in a Small and Rural Community.** Part of the Safety through Disruption University Transportation Center, this project marks the first attempt to conduct a real-world assessment of AV's potential safety impacts as a disruptive technology to offer older adults a pathway to continued independent mobility in underserved communities. Collaborating with industry partners, we will explore how older adults can more safely transit and get access to health care with a "2-in-1" (taxi + telemedicine) service delivered via AV. The perceived and objective safety impacts of this novel service will be explored along with changed travel patterns and reduced healthcare trips.

**Co-Principal Investigator. (Sub-contract from Birkeland Current). 2019-2022. Improved AD/ABD Assessment Sensitivities Using a Novel In-Situ Sensor**

**Systems.** The ability to perform various daily functions is an established predictor of cognitive decline in older adults and a useful predictor in independent living and functioning. This fast track SBIR project funded by the National Institute on Aging addresses the critical need for better assessment tools in dementia research and care. The primary objective is to demonstrate the feasibility and effectiveness of using the Birkeland Current Sovrin IoT system to continuously and accurately assess daily functions, ADLs, and IADLs, for persons experiencing cognitive decline in a home or assisted care settings. Texas A&M is serving as the academic partner and will facilitate input from the advisory group as well as oversee the evaluation.

**Co-Principal Investigator. 2019-2022. The Rural Moonshot Program.** The staggering burden of diabetes in Texas calls for a transformative new initiative. Toward this end, Blue Cross Blue Shield (BCBS) is partnering with Texas A&M to launch a Rural Health Moonshot Initiative. Building upon existing infrastructure, we are developing a diabetes intervention program with specific aims to: (1) examine the effectiveness of different diabetes self-management approaches on self-care behaviors and clinical outcomes; (2) assess the impact of the different approaches on health care utilization and associated costs; (3) conduct a process evaluation of the feasibility, usability and adherence to each intervention protocol; and (4) recommend best practices that can be both scaled and sustained over time. In addition to this intervention program, we are conducting a secondary analysis of administrative claims data to better understand patient's clinical trajectories and related costs that can help inform the cost effectiveness of different intervention approaches.

**Principal Investigator (Multi-PI). 2018-2022. Dementia Friendly Communities to Promote Active Living.** Little is known about the role of different environmental domains (e.g., built, natural and social) on physical activity, social interaction, and overall independence of persons with dementia. Funded through the National Institute on Aging as an administrative supplement to an ongoing NIH study of environmental impacts on physical activity, this project has three specific aims, centered on advancing the understanding of various housing and neighborhood environments for persons with AD/ABRD. By identifying the significant barriers and facilitators in the built, natural, and social environments in which people with AD/ABRD live, and by collaborating with dementia experts and built environmental professionals, this research aims to identify environmental strategies to promote physical activity, social interaction, and independence of people with AD/ABRD and reduce burdens on their caregivers. This project will be utilized to refine study protocols and obtain pilot data for more extensive research in this understudied area.

**Principal Investigator (Sub-contract from Baylor Scott & White Health). 2018-2023. GamePlan4 Care: Web-based Delivery System for REACH II.** With an aging population, there is a rapidly growing number of persons with dementia, and concerns about burdens placed on family caregivers. This NIH-funded research applies technology to an existing evidence-based intervention, Resources for Enhancing Alzheimer's Caregiver Health II (REACH II). The goal is to create a scalable and sustainable on-line family caregiver support system to be accomplished

through two study aims: (1) advance the current proof-of-concept GP4C into a viable delivery system for the REACH II intervention; and (2) compare the relative impact of GP4C and GP4C-Education on a wide range of family caregiver outcomes.

GamePlan4Care is a novel multifaceted intervention concept tested in a previously funded Texas Cares grant. Working collaboratively with colleagues at Baylor Scott and White Health who are designing and implementing GamePlan4Care, Center investigators are responsible for evaluation.

**Principal Investigator (Multi-PI). 2018-2023. Fighting Obesity by Reinventing Public Transportation: A Natural Experiment.** Use of public transit is associated with increased physical activity and hypothesized to reduce the risk of obesity and other age-related chronic conditions such as cancer. This timely study uses a pre-post case-comparison design to examine the causal impact of Bus Rapid Transport (BRT) and other supporting strategies on residents' physical activity. The specific aims are to: (1) determine physical activity impacts of BRT; (2) examine physical activity impacts of specific implementation strategies, including education (e.g., lifting the knowledge barrier by offering a smartphone app and training to assist transit trip scheduling) and modifying cost (e.g., lifting the financial barrier to transit use by executing an introductory free-fare strategy); and (3) explore benefits and costs of BRT implementation, and barriers and facilitators of BRT use.

**Principal Investigator (Multi-PI). 2015-2022. Physical Activity Impacts of a Planned Activity-Friendly Community (AFC).** With a multidisciplinary investigative team representing public health, architecture, engineering, computer sciences and education, this NIH-funded longitudinal, case-comparison study will examine how an activity friendly community, which embodies the best practices in environmental design and policy, can increase residents' levels of physical activity and influence when and where they are physically active. It will also provide insights into why environmental and psychosocial factors influence physical activity, and how place impacts lifestyle behaviors related to the burden of obesity. The specific aims are to: (1) examine the short-term and long-term changes in total PA levels and in spatial and temporal patterns of physical activity after sedentary or insufficiently active individuals move from non-AFCs to an AFC; and (2) determine what built and natural environmental factors lead to changes in Physical activity among these populations, either directly or indirectly by affecting psychosocial factors related to physical activity.

## Completed Projects:

**Co-Principal Investigator. 2018-2021. Assessing the Utility of Dementia Patient Monitoring Technology.** Persons living with dementia (PWD) who wander due to disorientation and underlying agitation are at increased risk for harm due to being in an unsupervised environment, which can increase the burden of care for family caregivers. This pilot study, funded by the Texas Alzheimer's Research and Care Consortium, aims to test the feasibility of a multi-component intervention that integrates a technology-based approach to increase PWD safety with evidence-informed skills training for caregivers. It examines the usability of a specially programmed watch (e.g., amount of time worn by PWD, features used by caregivers) and user satisfaction (e.g., whether it meets user expectations and needs, ease of use, what, if any changes the users would recommend) of the wearable technology that provides location information and two-way communication between caregivers and care-recipients.

**Co-Principal Investigator. 2019-2021. Dementia Connections: Expansion of Dementia Specific Case Management.** Given the aging of the population, there is an urgent need to provide better, more responsive services for individuals with Alzheimer's disease and related dementias and their families. The purpose of this project is to conduct a rigorous evaluation of the Dementia-Specific Case Management program. With continued funding from the Administration for Community Living, the program expansion will include: (1) improved efficiencies in service provision to better address unmet needs; (2) an addition of a medication management program (HomeMeds) and medical case reviews to reduce individual's adverse health events; and (3) planned collaborations (e.g., community organization, an integrated health system; and an academic health care center) to provide necessary referrals and information to make the business case for the dementia-specific care management model.

**Principal Investigator (Multi-PI). 2020-2021. COVID-19 for Vulnerable Populations: Longitudinal Study on Evolving Community Impacts among Affordable Housing Residents and Roles of Physical and Social Environments.** With the spread of COVID-19, there is a timely need to understand impacts of COVID-19 using new assessment tools. Texas A&M University School of Innovation is supporting a project to understand: (1) how COVID-19 affects the daily living and health of affordable housing residents in Austin, Texas and (2) how physical and social environments help or deter the COVID-19 coping process in this vulnerable, high-risk population. This project will assess impacts of COVID-19 on residents' daily life and health using Ecological Momentary Assessment, a data collection method that repeats sampling of subjects' behaviors and experiences in real time, in their natural environments.

**Co-Principal Investigator. 2019-2021. Working on Wellness: Promoting Physical Activity through Tactical Urbanism.** Alarming rates of obesity are a persistent public health challenge in Hidalgo County, Texas. Since 2015, Working on Wellness

(WoW) coalitions in Hidalgo County have collaborated to develop and implement policy, systems and environmental (PSE) interventions that address environmental determinants of obesity. This project will serve as a training laboratory for students to design and implement a community intervention that addresses gaps in the built environment in order to create an environment that supports physical activity. Public health students will have an opportunity to collaborate with WoW coalition members, transportation planners, urban planning students and public health faculty to develop and implement a pop-up demonstration project that utilizes tactical urbanism strategies in an effort to enhance and increase physical activity opportunities for healthy living.

**Co-Principal Investigator. 2019-2020. Teens Think Smart: A Novel Approach to Preventing Opioid Misuse among Adolescents in Rural Texas.** Funded by the Health Resources and Services Administration, this project is a multi-component community-based opioid abuse and misuse prevention intervention targeting 300 rural seventh and eighth grade students in multiple rural Texas counties. The project will be informed by a community-based participatory methodology, which engages the community through the formation of health coalitions that will participate in a community readiness assessment, and assist with planning and implementing the Teens Think Smart curriculum, engaging school districts, local government, law enforcement, and health entities.

**Principal Investigator. 2018-2020. Texas A&M Triads for Transformation Opioid Epidemic's Impact on Older Adults.** While public health officials recognize the devastating nationwide impacts of the opioid epidemic on Americans of all socio-demographic backgrounds, scant attention is paid to the impact of opioid use/misuse among older adults, especially those in rural areas. This preliminary research, funded through the President's Excellence Award, will: (1) identify older adults who are at high risk of negative impacts due to the opioid crisis; (2) understand the myriad ways in which older adults may be affected; (3) evaluate the costs of the epidemic in terms of needed medical care and social services, both personally and to the health care system; and (4) conduct an environmental scan of effective clinical, educational, behavioral, technological and/or policy solutions for mitigating impacts of the opioid epidemic on older adults and their families.

**HSC Lead Investigator. 2015-2020. Healthy South Texas.** Recognizing the combined strengths of Texas A&M University AgriLife Extension and the Health Sciences Center, the Texas legislature set aside substantial funding for a Healthy South Texas Initiative. The focus of this initiative is on the delivery of prevention and outreach services to 27 counties in South Texas. Diabetes, Asthma, Infectious Disease, and Well baby promotion are the initial priority areas for a proposed ten year planning cycle. The Health Science Center is responsible for adding health content and infrastructure to expanded outreach activities, and for creating educational opportunities to enhance the pipeline of professional and lay experts focused on prevention and management strategies improving the health and well-being of South Texas residents. The School of Public Health is responsible for scientific direction

and the evaluation of the ten points of action. Healthy South Texas serves as the pilot project for an expanded Healthy Texas.

**Co-Principal Investigator. 2011-2019. Establish Self-Management Programs and Wellness Using Evidence-Based Designs.** The Texas Health and Human Services Commission received federal funding through the Centers for Medicaid and Medicare's to implement an 1115 Transformation Waiver project to provide quality care for low-income Texans. The Center for Population Health and Aging provides a centralized resource for training, implementing, and evaluating evidence-based self-management and wellness programs. In conjunction with the Texas Active for Life® Coalition, the Center seeks to facilitate health care providers and agencies' capacity to select and implement evidence-based health promotion/disease prevention to reduce the burden of illness in our nine county Regional HealthCare Partnership (RHP) 17 region. Current activities are centered on disseminating Making Moves With Diabetes, a program which has the potential to improve clinical outcomes and result in substantial health care cost savings.

**Co-Principal Investigator. 2016 to 2019. No Falls Partnership (NFP).** Falls continue to be a public health problem impacting older adults, their families, health care systems, and the aging services network. Funded by the Administration for Community Living, NFP will enhance the 2015-2017 Falls Reduction Education and Empowerment (FREE) project into an integrated network of 15 partners who will provide screening, referral, and participation opportunities for A Matter of Balance (AMOB). NFP will increase capacity by adding Spanish and Vietnamese AMOB to current system. NFP's goals are to: (1) increase number of low-income and minority participants in AMOB; (2) increase number of AMOB Master Trainers and Volunteer Lay Leaders; (3) increase underserved population by 15%, especially in falls "hotspots"; (4) create sustainable funding throughout integrated health care and managed care partnerships; and (5) utilize geo-mapping to enhance falls prevention infrastructure. Texas A&M serves as the academic partner.

**Principal Investigator. 2016-2019. SUSTAIN for Better Health and Health Care for Older Adults.** Widespread dissemination of evidence-based programs for older adults requires coordinated local and regional efforts. Funded by the Administration for Community Living to address the burdens of chronic disease among the aging population, this project will serve as the bridge to embed a suite of Stanford Patient Education Chronic Disease Self-Management Education (CDSME) programs within a 59 county region to strengthen and support Area Agency on Aging (AAA'S) services as a sustainable and reimbursable model. SUSTAIN's objectives are to: (1) create and evaluate a replicable healthcare referral model for linking clinical and community sectors; (2) examine Return on Investments (ROI) for the healthcare sector; and (3) strengthen AAA's by creating a business case for CDSME reimbursement.

**Co-Principal Investigator. 2016-2018. Texas Cares: Model for Dementia Capable Communities.** Funded by the Texas Alzheimer's Research and Care Consortium, this was a collaborative effort between Texas A&M and Baylor Scott and White

Health to provide Persons with Dementia (PWD) and their family caregiver's access to local services and supports that have been proven to promote the health and well-being of the PWD and their family caregivers. Objectives of this pilot research study were to concept test a comprehensive model of care to: (1) promote dementia friendly communities for Texans; (2) personalize educational and support services through candid interviews with dementia caregivers; and (3) create an online adaptation of an evidence-based intervention to provide tailored resources and coaching. This seed funding has resulted in funded projects to further develop and pilot test behavioral, environmental, and technological approaches to dementia care.

**Co-Principal Investigator. 2014-2018. Working on Wellness.** In response to the CDC Funding Opportunity on Programs to Reduce Obesity in High Obesity Areas, Working on Wellness (WOW), a community-based program was established to address obesity in Hidalgo County, Texas, where more than 40% of its 800,000 residents were obese. The Texas A&M AgriLife Extension Service and Texas A&M Health Science Center School of Public Health partnered to address the obesity issue in Hidalgo County by combining the skills and expertise of both organizations to improve access to healthier foods and safe places for physical activity. Bringing a wide array of specialists to support project implementation and evaluation, both organizations have a strong presence in Hidalgo County and considerable experience implementing and evaluating community prevention programs in border communities. Utilizing a community-based participatory approach, community assessments were conducted and proposed strategies for addressing high rates of obesity vetted with community stakeholders. The School of Public Health was responsible for the process and outcomes evaluation.

**Principal Investigator. 2015-2017. Texercise Select—Building the Evidence-Based Program.** Texercise Select is a statewide health promotion created collaboratively between the Texas Department of Aging and Disability Services and Texas A&M School of Public Health Program on Healthy Aging. The program combines: (1) education about the importance of physical activity and healthy eating; (2) skill-building sessions for learning how to set and achieve attainable lifestyle goals; and (3) a multi-component exercise program designed to increase strength, endurance, balance, and flexibility. Major objectives of this study were to examine: (1) the impact of Texercise Select on increased physical activity and healthy eating, enhanced social interaction, improved perceived quality of life, and better physical functioning; (2) the relationship between intervention dosage and study outcomes; (3) potential differential impacts across participant characteristics; (4) programmatic costs and quality-adjusted life years attributed to program; and (5) factors affecting (i.e. barriers, facilitators) program implementation, dissemination, and long/short-term sustainability. This research enabled Texercise select to be considered an evidence-based program and eligible for title 3D funding.

**Co-Principal Investigator. 2016-2017. Reinventing Public Transportation Programs to Fight Obesity Epidemic: A Pilot Study in El Paso, Texas.** Little is known about the causal impact of a rapid bus transit system on nearby residents'

physical activity. There are many methodological challenges to overcome in designing a rigorous longitudinal case-control study to understand how new transportation options affect obesity risk factors among a predominantly lower-income Hispanic population. With internal Texas A&M University funding (PESCA), a multidisciplinary team with expertise in architecture, urban design, transportation sciences, and public health conducted pilot work to develop valid, reliable, and culturally sensitive recruitment strategies and data collection protocols needed to submit a competitive NIH grant proposal in 2017. The R01 submission was reviewed successfully and Fighting Obesity by Reinventing Public Transportation: A Natural Experiment was funded in 2018.

**Principal Investigator (subcontract). 2015-2017. Falls Reduction Education and Empowerment (FREE).**The United Way of Tarrant County (UWTC), in partnership with eight Area Agencies on Aging (AAAs), the Texas Falls Prevention Coalition (TFPC) and other organizations, collectively known as “Falls Reduction Education and Empowerment (FREE) Partners,” was awarded funds by the Administration on Active Living, to reduce falls and falls risk in Texas. The School of Public Health oversaw the Texas Falls Free Coalition and evaluated the effectiveness of implementing A Matter of Balance (AMOB) among participating Area Agencies on Aging. The goal of graduating at least 4,000 participants in AMOB in Dallas/Fort Worth, Austin, San Antonio, Corpus Christi, and El Paso metropolitan areas was met. Through the TFPC, FREE provided training for FPPs to master trainers, physical therapists, emergency medical professionals and community health workers. FREE’s key sustainability partners, Texas Healthy at Home and WellMed, were consulted on best strategies to generate funding for program delivery and sustainability.

**Co-Investigator. 2016. Changing Mobility Patterns of the Senior Generation.** Funded by the Institute for Mobility Research (Germany), this multi-disciplinary research project was designed to develop new knowledge about seniors’ mobility. Combining experts across disciplines including sociology, psychology, transport studies, econometric modeling, urban planning, and travel survey methods, researchers employed descriptive and multivariate statistical analyses of travel survey data from five countries (China, Germany, Japan, United Kingdom, and the US) and five decades. Objectives included: (1) an analysis of historic and current travel behavior of people 65+ years; (2) identification of factors possibly changing mobility patterns of people 65+ ; (3) quantitative estimation of future travel behavior of people 65+; and (4) implications of future travel behaviors for transport system and BMW group.

**Principal Investigator (sub-contract). 2014-2016. It Takes a Village – A Multi-Disciplinary, Multi-Level Evaluation of the State Driven Fall Prevention Project.** Essential elements of effective fall prevention programming at the state level were identified to accelerate and improve the dissemination of these effective models and associated findings to a broader, national audience. CDC funding supported three aims to: (1) evaluate the impact of programs as they are scaled statewide; (2) provide technical assistance to bring programs to scale; and (3) disseminate findings to key

stakeholders. The ultimate impact of this initiative was to improve the health and functioning of the growing population of older Americans at-risk for falling.

**Evaluation Director (Implementation). 2011-2016. Texas Grow! Eat! Go!** As a subcontract to a United States Department of Agriculture grant to the Texas AgriLife Extension System, Texas A&M Health Science Center School of Public Health assisted in the evaluation of two intervention programs designed to improve physical activity and eating behaviors of third graders at Coordinated Approach to Child Health (CATCH) elementary schools across Texas that included: (1) Junior Master Gardener Program (JMG), and (2) Walk Across Texas Program (WAT). Thirty-two (32) Title I schools in four counties in Texas were invited to participate in the five-year project. The School of Public Health led the process evaluation examining key stakeholders' perspectives of the implementation, dissemination, and sustainability of this program.

**Co-Principal Investigator. 2014-2016. The Texas A&M University Coalition for Healthy Active Living.** Rapid advances in sensor technologies, big data analytics and processing, electronic health and medical records, and the realization of the so called "Internet of Things" have created a world in which devices and data can be harnessed to promote health and well-being in ways unimaginable just a mere decade ago. The Texas A&M University Center for Healthy Active Living (TAMU-CHAL) served as a research, education, outreach, and clinical nucleus within which multi-disciplinary research teams can be empowered to develop, test, and deploy new techniques and strategies which exploit this new ecosystem of data, services, and sensors to improve public and individual health. The core mission of this center was to engineer technologies and techniques for data collection and analyses, facilitate new forms of health research and analyses, and enable novel lines of health interventions, monitoring, and promotion for targeted populations of at-risk individuals.

**Co-Investigator, 2013-2016. Enhanced Breast and Cervical Cancer Prevention for Low Income and Underserved Using Transdisciplinary Collaboration in a Family Medicine Setting.** This grant tested innovative ways of increasing breast and cervical cancer screening and prevention activities in the Brazos Valley using nursing students and community health workers. The overall goal was to improve family medicine, nursing, and public health practice related to evidence-based, culturally-appropriate care in women's cancer services. This proved to be a successful model to expand breast and cervical cancer services in rural and underserved areas.

**Principal Investigator, 2009-2015. Cancer Prevention and Control Research Network.** Funded as a Special Initiative Project of the CDC Prevention Research Centers, the Communities of Texas: Cancer-Activity-Education-Research-Support (CTxCARES) was a member center of this CDC-funded thematic network. Our network was a catalyst for the adoption of evidence-based cancer prevention and control interventions in Central Texas. CTxCARES, as part of The Texas A&M School of Public Health Center for Community Health Development, partnered with Texas AgriLife Extension, Scott & White Healthcare, the Brazos Valley Area Agency on

Aging, and other community and state-wide agencies to foster research on cancer prevention and control. The initial project focused on examining strategies for improving quality of life in cancer survivors.

**Co-Principal Investigator. Policies, Programs, and Partners for Fall Prevention (PPFP). 2012-2015.** Funded as a Special Initiative Project of the CDC Prevention Research Centers, PPFP addressed the urgent need to identify more effective public health strategies for reducing falls, fall-related injuries, and fall-related rates of emergency room visits among the growing population of seniors. This unique partnership between Texas A&M Health Science Center and the University of North Carolina School of Medicine and Public Health, examined falls related policies in over 40 state fall prevention coalitions. Another aspect of PPFP was the evaluation of a training program for physical therapists to implement evidence-based fall prevention programs to be integrated with state and national fall prevention policies. The project developed fall prevention strategies and trained community health workers to help raise awareness about falls prevention and refer older adults to evidence-based programs.

**Principal Investigator. 2011-2015. Impact, Sustainability & Scalability of Multi-Component Falls Prevention Programs.** Working collaboratively with the Centers for Disease Control and Prevention (CDC) and the three funded State Health Department Injury Programs, the goal was to facilitate the evaluation of the processes and impacts of state-driven fall prevention programs for older adults. The two primary aims during the initial three years of the states' five-year, multi-component fall prevention program implementation were to: (1) determine the impact of the designated multi-component fall prevention interventions on health, health care utilization, and costs using quantitative and qualitative methods; and (2) build states' capacity for ensuring program successes by providing technical assistance on strategies for enhancing and monitoring the reach, fidelity, sustainability, and scalability of evidence-based fall prevention programming. This work resulted in a lessons learned report shared with CDC staff and grantees.

**Evaluation Director. 2011-2015. Enhanced Colorectal Cancer Screening in a Family Medicine Residency Program (Co-PIs: David McClellan and Jane Bolin).** This Cancer Prevention Research Institute of Texas (CPRIT) grant addressed a critical unmet need for colon cancer screenings in the Brazos Valley by increasing the number of low-income underserved Texans, 50 years and older, who are referred to the Texas A&M Family Medicine Residency Clinic for CRC screenings. This project improved access to cancer screenings and follow-up care through culturally relevant case management from Promotoras/Community Health Workers (P/CHW), while simultaneously increasing the pool of family medicine residents and practicing family physicians trained in colonoscopy screenings in Texas. The evaluation team tracked the availability, accessibility and appropriateness of cancer screenings.

**Co-Principal Investigator. 2008-2015. Statewide Evaluation of Childhood Obesity Prevention Policies in Texas.** This RWJF-funded project examined the

impact of two policy initiatives designed to improve physical activity (PA) and eating behaviors of children at risk for obesity in Texas: (1) the Safe Routes to School (SR2S) program; and (2) the revised WIC food package for children. Submitted jointly by the UT Dell Center (co-lead: Deanna Hoelscher) and Texas A&M (co-lead: Marcia Ory), this project used a mixed methods approach for evaluation of these policies and included community-level (observations, GIS), organizational (counts of active transport at school, key informant interviews), and interpersonal/intrapersonal (social norms about PA and food, safety perceptions, child PA, purchasing & food consumption) measures. Findings from this study were disseminated through a comprehensive policy outreach educational effort, including a series of high visibility policy forums and related activities coordinated through the Texas Health Institute and the Live Smart Texas coalition website to inform future policy implementation and development.

**Regional Director, 2010-2015. South, West and Central Consortium Geriatric Education Center of Texas (Texas A&M Health Science Center affiliate member).** Funded through the Health Resources and Services Administration, the SWAC GEC was based at the University of Texas Health Science Center at San Antonio. The primary purpose was to improve patient care for the aged through interdisciplinary partnerships with faculty and practitioners in the fields of gerontology and geriatrics. This was accomplished by providing culturally appropriate geriatric training to health professionals through both on-site and distance learning mediums. Working with our other member networks, the subcontract to Texas A&M Health Science Center provided the infrastructure to direct activities in the Brazos Valley to focus on advancing the knowledge base about chronic disease management for seniors.

**Co-Principal Investigator, 2009-2014. Special Initiative Project, Texas Healthy Aging Network (TxHAN) Center (PI: Joseph Sharkey).** The TxHAN was a member center of a CDC-funded thematic research and practice network promoting healthy aging research. Investigators at each member Center contributed to cross-cutting research initiatives, as well as developing and implementing externally reviewed site-specific research projects which were seeded through this mechanism. The TxHAN advanced key HAN research initiatives in the areas of physical activity and environmental assessment, while also engaging in addressing new research priorities identified by the HAN network in areas including evidence-based programming, depression, nutrition, and Alzheimer's Disease.

**Principal Investigator, 2012-2014. Patient Reported Outcomes in Patient Centered Medical Homes.** With supplemental funding from the National Cancer Institute, Texas A&M participated in a cluster-randomized pragmatic trial comprised of nine pairs of diverse primary care practices randomized to adopt and field My Own Health Report (MOHR). This study evaluated an electronic or paper-based, publicly available health behavior and mental health assessment paired with a counseling and goal setting tool, versus no systematic assessment. This pragmatic research

study examined how intervention practices independently integrated MOHR into their workflow, adapted their integration over time, and affected the patient experience.

**Evaluation Consultant. After Cancer Care Ends-Survivorship Starts for Adolescents and Young Adults (Access-AYA). 2011-2014.** This Cancer Prevention Research Institute of Texas (CPRIT) grant was designed to: (1) develop and deliver professional education to Central Texas medical professionals including family and internal medicine doctors, nurses and nurse practitioners, social workers and physical therapists; (2) engage with AYA survivors and their families to help them use resources to develop survivorship plans and to learn more about ways to reduce risk and improve their health and well-being; and (3) create networks, information and communication systems to improve access to survivorship services and resources.

**Co-Investigator. 2011-2014. ICANFIT.** Funded as a small grant through Baylor Scott and White HealthCare, ICANFIT was a web and mobile technology-based solution for older cancer survivors to promote physical activity and increase quality of life. Specific study aims were to: (1) gain an in-depth understanding of cancer survivors' needs and preferences for mhealth PA promotion programs; (2) develop a state-of-the-art, web and mobile device accessible program "ICANFIT" using a user-centered design approach; and (3) assess the feasibility and initial efficacy of ICANFIT by pilot testing it among 100 older cancer survivors (post-treatment) recruited from clinics and communities. A major accomplishment was the creation of an ICANFIT website (<http://www.icanfit.org/>).

**Academic Research Associate, 2010-2013 (extended without external funding). Community Research Center for Senior Health (PI Alan Stevens).** This NIA-funded project was designed to develop, implement, evaluate and disseminate evidence-based interventions that address multiple social and behavioral determinants of senior health. Specific Center aims were to: (1) create a sustainable infrastructure that promotes an interdisciplinary and multi-contextual approach to Senior health intervention research; (2) develop community-academic health center relationships which foster community participation in research planning, study participation, and dissemination of findings; and (3) provide guidance and support to investigators and community leaders in research design, evaluation, and data analytic techniques that balance the need for rigorous science and the practical realities of conducting health research in community settings. The School of Public Health serves as the academic partner of this activity, a major project of which was the development of a tool kit to identify and select evidence-based programs. (<https://www.evidencetoprograms.com/>).

**Principal Investigator. 2012-2013. Texercise: Evaluating its Reach and Effectiveness (TERE).** Texercise, a health promotions/disease prevention program of the Texas Department of Aging and Disability Services (TDADS), provides education, motivation and recognition tools to help older adults and people with disabilities engage in healthy lifestyles. In collaboration with the Community Resource Center for Senior Health centered at Baylor Scott and White Health Care in Temple,

Texas, TERE examined the existing Texercise program and its resources in order to document its evidence base. Major aims were to: (1) review past experiences with the implementation and dissemination of Texercise; (2) modify current materials for replication; (3) examine the program reach and effectiveness in at least ten program sites in Texas, and 4) publish findings in peer-reviewed Journals to increase the visibility of Texercise. The major accomplishment was the standardization of a new Texercise Select Program to be further tested.

**Principal Investigator. 2012-2013. Developing Partnerships for Delivering Evidence-based Self-Management Programs.** Chronic Disease Self-Management Program and Diabetes Self-Management Program workshops have been disseminated in the Brazos Valley and other regions in East Texas with support of the Texas Department of Aging and Disability Services. A grant from WellCare Health Plans, Inc. provided the opportunity to partner with a number of organizations in the Houston/Galveston area to build a private-public partnership for creating a sustainable system for delivering evidence-based self-management programs. This partnership enabled program delivery and training, technical assistance in program recruitment and selection, and evaluation of the program by documenting reach, adoption, and fidelity processes and outcomes.

**Principal Investigator (Subcontract to National Council on Aging). 2011-2013. Pilot Evaluation of the Chronic Disease Self-Management Program.** This Centers for Medicare and Medicaid Services (CMS) funded project was responsive to the requirements of Section 4202 subsection (b) of the Affordable Care Act (ACA) directing the Secretary of the Department of Health and Human Services to “conduct an evaluation of community-based prevention and wellness programs and develop a plan for promoting healthy lifestyles and chronic disease self-management for Medicare beneficiaries.” This study examined the impact of the Chronic Disease Self-Management Program (CDSMP) on health outcomes, utilization, and costs in an existing sample of participating beneficiaries by linking CDSMP records to Medicare administrative data. Working collaboratively with Stanford University, the Texas A&M Health Science Center Evaluation team was responsible for data linkage, analysis and report writing. This study demonstrated that the CDSMP met the triple health care aims of better health, better health care, and better value.

**Co-Investigator. 2011-2013. ÉPICO: Education to Promote Improved Cancer Outcomes (PI: Julie St. John).** The program was designed to increase delivery of comprehensive cancer services through development of a replicable, sustainable tailored training program for promotores on prevention, treatment, and healthy survivorship for colorectal, breast and cervical cancers among at-risk residents in the Lower Rio Grande Valley (LRGV) on the Texas-Mexico border. Specific aims were to: (1) equip promotores to educate residents on prevention, treatment, and survivorship issues related to colorectal, breast, and cervical cancers; (2) enable promotores to use tailoring strategies to improve their outreach efforts; and (3) increase residents’ prevention, treatment, and healthy survivorship behaviors. A critical role was advisement on translation and dissemination efforts.

**Evaluation Co-Lead, 2010-2012. ARRA Communities Putting Prevention to Work: Chronic Disease Self-Management Program (PI: Nancy Whitelaw).** The National Council on Aging served as the Technical Resource Center for this Administration on Aging Initiative which sought to enroll over 50,000 older adults throughout the Nation in chronic disease self-management programs. The evaluation team at the School of Public Health was responsible for the analytical aspects of the national evaluation. In collaboration with Stanford University, lead evaluators assessed the impact of the Chronic Disease Self-Management Program on self-reported health status, behaviors, and health care utilization among 1,000 seniors.

**Consultant, 2010-2012. Texas Healthy Lifestyles: Communities Putting Prevention to Work (PI: Jeffery Kaufman).** The state of Texas was awarded Recovery Act funding to disseminate the Chronic Disease Self-Management Program to over 3,000 older Texans. The State selected five geographic areas as regional sites for delivery and dissemination of this program. A critical role was to direct the state-wide evaluation effort to track program dissemination, document the adoption by local community agencies, and provide technical assistance on standardized data collection and fidelity processes among partnering communities. This partnership has proven to be an excellent educational opportunity as well as a means to disseminate and sustain the delivery of evidence-based programs throughout the state.

**Co-Director, 2007-2012. Research and Translational Research Core. Program for Rural and Minority Health Disparities.** This NIH-funded program (PI: Kenneth McLeroy) addressed rural and minority health issues by: (1) providing critical information on how population and setting characteristics impact food choice, dietary patterns, and the risk of obesity in minority and rural populations; (2) developing interventions to reduce the risk of obesity, particularly among rural, minority, and underserved individuals; (3) testing the differential effectiveness of diabetes self-management models in rural, urban and minority populations; (4) strengthening the ability of the Texas A&M System to support disparities research and the recruitment and training of faculty committed to disparities research; and (5) developing a health disparities institute that will serve the 9 universities and 6 state agencies of the Texas A&M System. Critical roles included serving as Co-Director of the Research and Translational Research Core and Co-Investigator on the Diabetes Intervention Study.

**Principal Investigator, 2008-2011. Nationwide Evaluation of Evidence-Based Programs (EBPs) for Seniors.** Working collaboratively with the Administration on Aging, the following objectives were addressed in a three-year cooperative agreement: (1) assess the current state of knowledge about EBP practice and evaluation; (2) identify strength and gaps in reaching aging populations, delivering EBP services, and building training and evaluation capacity; (3) recommend a nationwide evaluation plan, specifying design, measurement, desired outcomes, and other critical elements; and (4) indicate key players/areas of expertise needed to conduct the proposed evaluation plan. This activity was coordinated with the Healthy Aging Research Network.

**Evaluation Consultant, 2010-2011. Umbrella Partnerships-Be Active in our Towns (UP-BEAT). (PI: Julie Ribardo).** The Brazos Valley Community Action Agency, Inc. was awarded a contract from the Texas Department of Health and Human Services to build the infrastructure for preventing obesity in Brazos County. The goal was to increase community capacity to address obesity through strategic planning around evidence-based community strategies for obesity prevention and make healthy eating and physical activity easier choices in Texas communities through the implementation of evidence-based community strategies for obesity prevention. The evaluation included assessments of activities to promote environmental and policy strategies for obesity prevention in College Station and Bryan, Texas.

**Consultant, 2009-2011. Assessing the Built Environment in Colonias to Influence Policy Promoting Physical Activity in Mexican American Children and Families. (PI: Nelda Mier).** Funded by the Robert Wood Johnson Foundation Program in Salud America!, this study addressed how environmental and policy factors affected physical activity in economically-disadvantaged, understudied, Mexican American children and families in the Rio Grande Valley. Study objectives included obtaining and evaluating key stakeholder feedback. It involved conducting environmental assessments of different neighborhoods and presenting findings to key community stakeholders for action.

**Consultant, 2006-2011. Texas Healthy Lifestyles: Empowering Older People to Take More Control of Their Health Through Evidence-Based Prevention Programs (PI: Michael Wilson; Jeffery Kaufmann).** This four-year project created a focal point at the state level for evidence-based health promotion to help seniors take control of their lives and reduce the risk of disease and disability. The centralized evaluation effort examined study impacts in terms of the five Re-AIM elements and assisted in the evaluation of local activities to implement the Chronic Disease Self-Management Program.

**Co-Principal Investigator, 2008-2011. Testing a Low-Literacy Diabetes Self-Management Education Kiosk. (Co-PI: Jane Bolin).** This three-year research study, funded by The Morris L. Lichtenstein, Jr., Medical Research Foundation, evaluated the implementation and dissemination of a computer-assisted touch screen, low-literacy, Diabetes Education Kiosk in five clinics/organizations in the Corpus Christi/Coastal Bend region. After investigating readiness for implementation, the study team focused on translational implementation research questions, using a combination of focus group, survey, on site observation and computer tracking methodologies. After some local pilot testing in the Brazos Valley to test the feasibility and use of the Kiosk, we have redesigned the basic educational module to run off a web-based system so that we can more easily place KIOSKs in different geographical settings.

**Principal Investigator, 2004-2011. Health Maintenance Consortium Resource Center (HMCRC).** The Health Maintenance Consortium represented twenty-one

funded NIH grants examining factors associated with long-term behavioral maintenance. The Resource Center created an infrastructure to: (1) foster ongoing cross-site communications among the funded projects; (2) provide technical assistance to identify common questions, methods, and measures related to maintenance and sustainability and to address cross-cutting issues that add synergy to the individual projects; (3) establish a central clearinghouse for behavioral change concepts, assessment instruments, intervention protocols, methods, and data that can be beneficial for other researchers and practitioners; and (4) disseminate research findings to both researchers and practitioners. Nearly 50,000 individuals from adolescence to adulthood to old age were involved in this HMC-supported research, making this one of the largest group of studies of behavior change strategies.

**Director, 2006-2009. Learning Network.** Affiliated with the Active for Life® program, the Learning Network was designed to create a mechanism for sharing resources about successful approaches to active aging. Partnering with the National Blueprint, this project created an interactive Learning Network for the Building Healthy Communities Recognition Program which promotes the pairing of smart growth principles with activity programming for older adults.

**Co-Investigator, 2007-2009. Promoting Walking and Other Physical Activity among Obese and Diabetic Patients in Integrated Healthcare Plans (PI: Samuel Forjuoh).** Funded through the Baylor Scott and White Health Services Research Foundation, this pilot study examined both physician and environmental influences on patient activity levels by: (1) assessing if, and how, healthcare providers encourage walking and engagement in other physical activity to their obese and diabetic patients; and (2) identifying specific built environmental facilitators of, and barriers to, walking and engagement in other physical activity in the neighborhood. Factors influencing doctor-patient interactions and the doctor's understanding and application of environment-behavior-health linkages were examined. A major product was the development of a community resource guide for use by health care providers and patients to identify accessible places for physical activity.

**Consultant, 2007-2009. Texas Falls Prevention Coalition.** This two-year project, funded through the Department of Aging and Disability Services, examined the implementation and outcome of A Matter of Balance, an evidence-based falls prevention program delivered throughout Texas. Technical assistance on study design, data protocol issues, and evaluation tools to assess major impacts on health and fall-related outcomes was provided. This project was coordinated with the Texas Healthy Lifestyles Program and the A Matter of Balance Program in the Brazos Valley. Established in 2007 to promote, implement, and evaluate evidence-based programs and policies to reduce falls and injuries in older adults, the Texas Falls Prevention Coalition transferred activities to the Texas A&M School of Public Health to reconstitute a Steering Committee of broad-based stakeholders to promote a multi-faceted approach to falls prevention and chronic disease self-management throughout Texas.

**Director, 2004-2008. Research Core Project for the Texas A&M University System CDC-funded Prevention Research Center (PI: Kenneth McLeroy).** The purpose of this research core was to improve the health of rural and underserved populations through better implementation, dissemination, and sustainability of clinical and community prevention and disease management guidelines. Two primary questions were addressed: (1) why community and clinical practice guidelines, which are designed to improve health, were not better utilized? and (2) what strategies for better guideline implementation, adherence, and dissemination in especially vulnerable populations (including poor rural populations) were most effective? This activity served as the foundation for our later diabetes prevention and management research and practice efforts.

**Co-Principal Investigator. 2007-2008. Examining Disparities in Hospital Treatment Leading to Lower Extremity Amputation (LEA) among Residents Living Along the Texas-Mexico Border. (Co-PI: Jane Bolin).** Specific aims of this pilot study were to examine differences in race/ethnicity, age, gender or insurance status among those who undergo LEA, exploring geographic and SES differences in total charges for care and particular treatments and therapeutic interventions. The high incidence of lower extremity amputations at the border was documented.

**Consultant, 2004-2008. A New Tool Applies Research to Assisted Living Design (PI: Susan Rodiek).** This Phase I and II SBIR grant was funded by the National Institute on Aging to improve outdoor access for residents of long term care facilities. In Phase I, an educational tool was developed that made it easier for decision-makers to apply evidence-based research to the design of new or existing facilities, leading to potential benefits for residents. The specific aims were to: (1) develop the relevant behavioral design principles; (2) create an interactive multimedia instructional format on CD/ DVD; and (3) evaluate the prototype for usability and effectiveness with representative target users in the design and provider industries.

**Consultant, 2005-2006. Enhancing Self-Care Activities of Patients with Diabetes Using a PDA: A Pilot Study. (PI: Samuel Forjough).** The specific aims of this Baylor Scott and White Health Services Research Program project were to: (1) assess the feasibility of PDA use in diabetes self-care by patients aged  $\geq 18$  years with type 2 diabetes; (2) identify which patients would benefit most from the use of a PDA; and (3) explore whether the use of a PDA as an adjunctive diabetes self-care device leads to better or improved patient adherence to diabetes self-care activities. This work was foundational in our development of self-assessment tools and related mobile health applications.

**Principal Investigator, 2004-2005. Subcontract with University of Minnesota.** The purpose of this subcontract to an existing NIH grant, Theory-based Interventions for Smoking and Obesity, was to foster cross-site analyses within the NIH-funded Behavioral Change Consortium. This contract supported five challenge grants and related technical assistance, along with resources, for sending common data to the Health Maintenance Consortium Resource Center. Challenge grants involved

conceptual, methodological, and analytical work related to nutrition, physical activity, and smoking.

**Co-investigator, 2003-2004. Medication Use, Dietary Intake, and Functional Outcomes among Homebound Elders. (PI: Joseph Sharkey).** This was a small grant supported by The Texas A&M University System School of Public Health and Baylor Scott and White Health Services Research Program. This project examined medication use, dietary intake, and functional outcomes among a large and diverse sample of frail elders in the community. The project delineated drug-use patterns that may influence dietary intake and nutritional status, physical performance, and disability, and it identified appropriate targets for tailored interventions.

**Principal Investigator, 2002-2005. Assessing Existing Screening Guidelines for Physical Activity for Older Adults.** Goals for this Robert Wood Johnson funded project included: (1) reviewing existing literature regarding exercise guidelines and the extent of adverse events associated with exercise interventions and different screening approaches for older adults; (2) surveying the trans-NIH Behavior Change Consortium to provide the latest empirical data on screening criteria utilized in these premier behaviorally-based physical activity interventions; and (3) conducting focus groups and organize informal working group sessions at selected national professional meetings. A screening roundtable of key stakeholders was organized to discuss strategies for disseminating best practices and tracking any adverse events associated with new recommendations. A major product was the development of the EasyForYou Screening tool.

**Principal Investigator, 2002-2004. Doctor-Patient Encounters: Communications about Lifestyle Recommendations and Other Geriatric Conditions.** This was a small grant supported by The Texas A&M Health Science Center School of Public Health and Baylor Scott and White Health Services Research Program. The purpose was to examine how doctors communicate to their older patients regarding lifestyle recommendations and the influence of patient, physician, and setting factors. Additionally, we examined the amount of time spent in different lifestyle discussions. The study concluded that precious little time was spent on provider-patient discussions about lifestyle behaviors.

**Director, 2001-2009. Active for Life®.** Active for Life® was a RWJF-sponsored National Program Office (NPO) to examine the applicability of two research-based physical activity programs to community settings. The primary purpose was to learn how to translate research to practice with an emphasis on how research-based programs need to be altered to be responsive to community needs and structures. In addition to providing scientific leadership, the NPO, in coordination with an external evaluation team, provided technical assistance to nine grantee sites to examine process and outcomes for more than 8,000 adults, age 50 and older. This study provided substantial experience in identifying essential intervention elements and learning how to make programs more culturally and population relevant so that they could be widely disseminated and sustained over time. It serves as the namesake for

our Active for Life® program, a compilation of evidence-based and evidence-driven programs and interventions to improve the health and wellbeing of older Texans.
