## **BIOGRAPHY**

Cason Schmit—an assistant professor at Texas A&M University School of Public Health—directs the MPH program and the Program in Health Law and Policy. A licensed attorney with a JD from the Sandra Day O’Connor College of Law at Arizona State University, Schmit’s interdisciplinary research spans law, health informatics, ethics, and public health policy, with notable publications, including in *Science*. His work, initially at the Centers for Disease Control and Prevention (CDC), and continuing at Texas A&M, explores the role of law as a tool to promote population health, focusing on topics like health data, vaccination, community health workers, telehealth, and the COVID-19 response. Schmit’s current research centers on health information technology, particularly the alignment (or misalignment) between law and public health ethics. A voting member of the IEEE AI governance standards workgroup, he is actively exploring AI regulatory strategies that integrate public health policy innovations. Schmit also advises state and national policymakers and advisory bodies on health data policy and public health data governance, collaborating with organizations such as the CDC, the Council for State and Territorial Epidemiologists, and the National Committee on Vital and Health Statistics. His work has directly influenced proposed federal public health data modernization policies.
