The Center for Population Health & Aging serves as the focal point for several initiatives that can improve health, health care and value for older adults, including:

- Evidence-based programs
- Community & worksite wellness
- Geriatric care
- Economics & policy
- Building healthy communities
- Mobile health technologies

**Mission:** The Center for Population Health & Aging promotes successful aging through innovations in research, education and practice that examine social, behavioral, economic, environmental, and technological solutions linking academic and real-world settings.

The center includes faculty participation across Texas A&M University, including the Health Science Center, AgriLife Extension, Architecture, Education and Human Development, Engineering, Liberal Arts, Bush School and Transportation Institute.
